DETAILED ACTION

Drawings

1. New corrected drawings are required in this application because legends are not complete for figures 1 and 3-7. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Specification

2. The abstract of the disclosure is objected to because it includes the title of the invention. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(e) that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2662

4. Claims 1-22 are rejected under 35 U.S.C. 102(e) as being unpatentable over Larsson et al (USPUB 20030161268), hereinafter referred to as Larsson.

Re claims 1, 2, 7, 12, 13 and 18, Larsson discloses a wireless multihop network (*a mobile ad hoc network (MANET)*, figure 3) comprising a plurality of mobile nodes each comprising a wireless communication device (figure 14, element 120) and a controller (figure 14, element 110) operating in accordance with a multi-layer protocol hierarchy.

Larsson discloses the application layer setting multiple data rate requirements

(*establishing a quality of service (QoS) threshold*, paragraph [0179], lines 5-14).

Larsson discloses setting physical link parameters along the path from the source node to the destination node to find a feasible path and sending the data over the selected path

(*determining the QoS metric for the at least one selected route and receiving data from the at least one source mobile node via the at least selected route*, paragraphs [0096-0097])

Larsson discloses a wireless communication device adjusting transmit power to guarantee that the resulting CIR (Carrier-to-Interference Ratio) is not deteriorated below a certain

CIR level (*adjusting signal reception gain and pattern when the QoS metric has fallen below the QoS threshold*, paragraph [0170], lines 1-9).

Re claims 3, 8, 14 and 19, Larsson discloses the upper protocol layer being an application layer ((paragraph [0052], lines 6-8).

Re claims 4, 9, 15 and 20, Larsson discloses the intermediate protocol layer being a network layer ((paragraph [0052], lines 2-5).

Re claims 5, 10, 16 and 21, Larsson discloses the lower protocol layer being a physical layer (paragraph [0052], lines 2-5).

Re claims 6, 11, 17 and 22, Larsson discloses the quality of service based on error rate (paragraph [0170]).
